verified.

Description of Wound(s): 2 cm simple linear wound

Pre-procedure Anesthesia: None

The wound was copiously irrigated with saline solution and explored. There were no foreign bodies noted and no tendon injuries. The wound was reapproximated in one layer(s) utilizing skin adhesive. No sharp debridement was required. There was excellent reapproximation of the wound edges. The patient tolerated the procedure without complication and a dressing was placed.

**Patient Education**

Stitches, Staples, or Adhesive Wound Closure, Easy-to-Read

Facial Laceration
